

Homework No. 05 (Fall 2024)

PHYS 205A-002: UNIVERSITY PHYSICS

School of Physics and Applied Physics, Southern Illinois University–Carbondale

Due date: Wednesday, 2024 Sep 18, 2:00 PM, on D2L

Instructions

- You are encouraged to use any of the resources to complete this homework. However, the extent to which you depend on resources while doing this homework is a measure of how much extra work you need to put in to master the associated concepts. Solutions should be the last resource.
- Links to solutions are provided. Further, links to few variations of the problem are provided that serve as practice problems.
- Describe your thought process in detail and organize it clearly. Make sure your answer has units and right number of significant digits.
- Additional problems, with hyperlinks to exams, are available in [Lecture Notes](#).
- After completion, scan the pages as a single PDF file, and submit the file on D2L (under Assesments → Assignments). You can replace your PDF file, only the last file is graded.

Problems

1. (10 points.) A boat is able to move through still water at 20.0 m/s. It makes a round trip to a town 3.0 km downstream. Assume all motion to be along a straight line. That is, the boat first travels in the direction of river and while returning travels against the direction of river. If the river flows at 5.0 m/s, determine the time required for this round trip.

[\[Solution\]](#)

2. (10 points.) A car travels due east with a speed of 40.0 km/h. Raindrops are falling at a constant speed vertically with respect to the ground. The traces of the rain on the side windows of the car make an angle of 76.0° with the vertical.
 - (a) Find the speed of the rain with respect to the ground.
 - (b) Find the speed of the rain with respect to the car.

[\[Solution\]](#)

3. (10 points.) The wind is flowing at a speed of 20 m/s in the direction 30° North of West with respect to the ground. Determine the direction and speed of the aeroplane should head (with respect to the wind) such that the aeroplane heads North (with respect to the ground) with speed 80.0 m/s.

[Solution]
