Homework No. 03 (Fall 2024)

PHYS 205B: UNIVERSITY PHYSICS

School of Physics and Applied Physics, Southern Illinois University-Carbondale Due date: Tuesday, 2024 Sep 10, 9:30 AM, on D2L

Instructions

- You are encouraged to use any of the resources to complete this homework. However, the extent to which you depend on resources while doing homework is usually a measure of how much extra work you need to put in to master the associated concepts. Solutions should be the last resource.
- Describe your thought process in detail and organize it clearly. Make sure your answer has units and the right number of significant digits.
- Additional problems, with hyperlinks to exams, are available in Lecture Notes.
- After completion, scan the pages as a single PDF file, and submit the file on D2L (under Assessments → Assignments).

Problems

1. (10 points.) Consider a thin conducting spherical shell of radius a = 1.0 cm with a total charge of Q = 3.0 nC (distributed uniformly) on its surface. The electric field due to such a spherical charge distribution is given by

$$\mathbf{E} = \begin{cases} 0, & \text{if } r < a \text{ (inside)}, \\ \hat{\mathbf{r}} \frac{kQ}{r^2}, & \text{if } a < r \text{ (outside)}. \end{cases}$$
 (1)

- (a) Find the electric field 0.5 cm from the center of the charge distribution.
- (b) Find the electric field 2.0 cm from the center of the charge distribution.

[Solution]

- 2. (10 points.) Consider a configuration consisting of two charged concentric spherical shells of radius a and b with charges Q_a and Q_b , respectively. Let us have a < b. Given $a = 1.0 \,\mathrm{cm}$, b = 3a, $Q_a = +1.0 \,\mathrm{nC}$, and $Q_b = -3.0 \,\mathrm{nC}$. See Figure 1.
 - (a) Determine the expression for the electric field in region r < a. Determine the magnitude and direction of the electric field at $r = 0.25 \,\mathrm{cm}$.

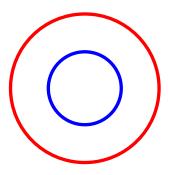

Figure 1: Problem 2

- (b) Determine the expression for the electric field in region a < r < b. Determine the magnitude and direction of the electric field at $r = 2.0 \,\mathrm{cm}$.
- (c) Determine the expression for the electric field in region b < r. Determine the magnitude and direction of the electric field at $r = 4.0 \,\mathrm{cm}$.

[Solution]

3. (10 points.) A large, flat, horizontal sheet of dielectric material has a charge per unit area of $8.85 \,\mu\text{C/m}^2$. Find the electric field just above the middle of the sheet. See Figure 2. Hint: Use

$$\vec{\mathbf{E}} = \hat{\mathbf{n}} \frac{\sigma}{2\varepsilon_0}.$$
 (2)

Figure 2: Problem 3

Solution

4. (10 points.) A large, flat, horizontal sheet of conducting material has a charge per unit area of $8.85 \,\mu\text{C/m}^2$. Find the electric field just above and below the middle of the sheet. See Figure 3. Hint: Use

$$\vec{\mathbf{E}} = \hat{\mathbf{n}} \frac{\sigma}{\varepsilon_0}.\tag{3}$$

Figure 3: Problem 4

Solution

5. (10 points.) Consider a region of uniform electric field

$$\vec{\mathbf{E}} = (1.0\,\hat{\mathbf{i}} + 2.0\,\hat{\mathbf{j}}) \times 10^3 \,\frac{\mathrm{N}}{\mathrm{C}}.\tag{4}$$

Calculate the electric flux through a rectangular plane $0.40\,\mathrm{m}$ wide and $0.20\,\mathrm{m}$ long if the plane is parallel to the yz plane.

[Solution]

- 6. (10 points.) A charge of $105\,\mu\mathrm{C}$ is at the center of a cube of edge 75.0 cm. No other charges are nearby.
 - (a) Find the flux through each face of the cube.
 - (b) Find the flux through the whole surface of the cube.
 - (c) Would your answers to parts (a) or (b) change if the charge were not at the center?

[Solution]

7. (10 points.) Charges are placed on the z=0 plane such that it forms a square lattice of

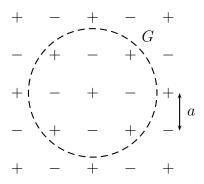

Figure 4: Problem 7

length a that extends to infinity in the plane. Refer Figure 4. The charge on each lattice

point has a magnitude of 17.7×10^{-12} C. Determine the electric flux through the surface G of a sphere of radius R = 1.7 a shown in Figure 4.

[Solution]

8. (10 points.) A point charge Q sits at the center of a charged spherical shell of radius R with charge Q' uniformly distributed on its surface. Using Gauss's law to find the expression for electric field inside and outside the spherical shell.

[Solution]
